

Screen Designer

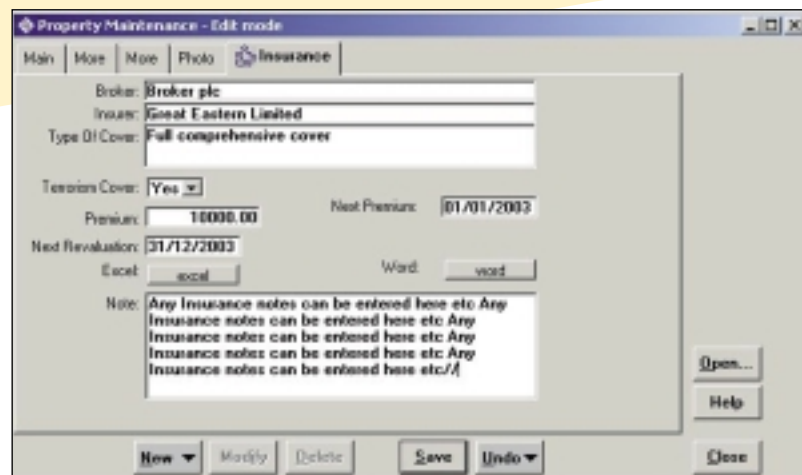

This superb facility adds the flexibility of a purpose-designed system to the inherent benefits of the TRAMPS packaged solution.

Now you can decide what information you want to record, how the screens will look and how the data will be displayed – all without programming knowledge. Screen Designer enables the user organisation to create and link an unlimited number of screens throughout the system, adding fields such as descriptions, numbers, dates, drop down yes/no, images, AVIs, MS Word or Excel documents.

Setting up new data areas is made quick and easy by the use of wizards that guide you step by step through the process.

Reports

As the new fields are automatically created in the system tables, TRAMPS quick reporting tools can be used to create custom reports combining the existing database fields together with your new ones.

Screen Designer gives you the best of every world; the most stable and reliable property and accounting system with the ability to customise and report upon the data that is important to your organisation. The different field types that can be added are:

- ◆ Text
- ◆ Dates
- ◆ Images (jpg)
- ◆ MS Word documents
- ◆ Numbers
- ◆ Drop down yes/no
- ◆ AVIs (video)
- ◆ MS Excel documents
